

Pneumatic decontamination showers can be used as emergency decontamination positions as well as being used in combination with all universal tents. The showers are designed in size so that they can be quickly and easily installed into the tents. In doing this the functional radius is extended by a changing area.

The showers can be supplied in the two following versions:

Decontamination shower with external basin

This enables post-cleaning of boots and, at the same time, avoids any splashing of contaminated shower water on the ground.

Compact shower

Due to the low stand area of 160 x 160 cm/63 x 63 inch it is able to be used even in small spaces and is simultaneously an economical alternative. It is especially designed for the industrial sector.

Both showers have the following features:

- low weight and compact packing size
- shower curtain and exchangeable basin
- self-assembling support frame
- support frame which can be repaired
- only one person required for assembly
- tear-proof polyamide texture with neoprene coating
- a quick inflation time of only one minute

Basic fittings of the decontamination tent

- shower curtain and insertion basin
- 8 moveable shower jet heads fixed at different heights
- device for additional insertion of a decontamination hand shower (hand shower is an optional accessory)

Shower jet head

Hand shower

Technical Data for Showers
