

JONSERED

**MOBILE
RECYCLING**

**Whatever your needs, we have the
JONSERED loading crane for you**

Mobile JONSERED Recycling crane.

For scrap metal, ELV's, unsorted waste, bulky waste, construction waste, paper, glass, garden and landscaping waste and much more.....

The right crane gets firmly to grips with the consignment

Very high demands are made of cranes dealing with recycling and raw materials. We are not only talking about lifting, lowering and turning, but also increased pulling, pressing and dragging of the consignment. The JONSERED loading crane copes with these demands even over long periods. For decades JONSERED has stood for quality, reliability, speed and long working life.

JONSERED offers you a comprehensive range of 6tm to 24tm cranes especially designed for use in recycling.

The JONSERED crane with its hydraulic plant, high power capacity and optimally tuned hydraulic cylinders, makes it possible to work very quickly and consistently. Second boom cylinders and hydraulic hoses are arranged at the side and at the top of the crane arm. This protects these components of the JONSERED crane from being damaged. The underside of the arm system remains free to allow unrestricted handling of the often bulky recycling material.

- High seat behind or to the side of the column, with option of no high seat
- Different column heights
- Variable lengths of arm systems, e.g. removable lengthwise in the container.
- Double telescopes
- Mechanical control using manually operated levers, electro-hydraulically using joysticks or remote control by radio.
- Load-sensing hydraulic system (lower energy requirement, long working life, minimal oil heating).
- Tiltomatic hoisting device used for automatic 180 degree parking of the stabilizer legs.
- Comprehensive additional equipment contained in the detail and accessories for use in recycling work

For special use in mobile recycling we provide a suitable equipment warranty for the Jonsered loading crane and construction combinations using a shuttle system.
